

## Scope

This document describes how to test USB Host HID KB example.

## Preparation

### Host

A board, i.e. twrk22f120m, which is running host\_hid\_keyboard\_twrk22f120m example.

### Device

A usb Keyboard.

## Steps

Follow the steps to run the HID KB demo.

1. Run the host\_hid\_keyboard\_twrk22f120m example and you will see the printed guide note.
2. Plug-in the KB and you will see some attach information printed out.
3. When you press the KB, the relevant information will be output to the screen.

Such as, when the F key is pressed, you can see the letter “F” on the screen.

Note: As a simple demo, some special function keys beyond regular are not supported.
